OptiMobile signs license agreement with Sony Ericsson

OptiMobile to deliver software client resources for Internet telephony (VoIP)

Stockholm, April 3, 2007. OptiMobile, a leading company within the field of seamless convergence between wireless Internet telephony and cellular telephony, today announces that it has signed a license agreement with Sony Ericsson. Under the terms of the license agreement Sony Ericsson licenses a SIP based Voice over IP client SW as a resource in its Symbian based mobile telephones to support wireless Internet telephony.

“OptiMobile is proud to deliver client application resources to Sony Ericsson mobile phones for Internet telephony” says Lars Edman, CEO of OptiMobile. “The agreement further strengthens our already existing relationship with Sony Ericsson and is adding yet another leading company to our customer portfolio.”

About OptiMobile

OptiMobile offers operators and providers of enterprise communication products a completely unified voice solution – WBX. End-users are able to use WLAN equipped mobile phones for calls over the Internet via WLAN whenever a WLAN Internet access point is within reach. Calls are automatically and seamlessly transferred between Internet and cellular networks.

OptiMobile is a leader within the field of seamless convergence between wireless Internet telephony (VoIP) and cellular telephony. Supported by OptiMobile’s WBX solution operators and providers of enterprise communication solutions are able to offer end-users completely unified services, independent of the networks and radio access technologies being used from time to time. End-users benefit from lower cost of calls, reduced complexity due to unified call handling, higher availability and increased productivity. In general, calls made using VoIP have better sound quality than cellular calls. OptiMobile is licensing voice processing software for VoIP from Global IP Solutions.
