

OptiMobile announces broad commercial availability of UniPhone software for mobile telephones

Stockholm, August 25 2008. OptiMobile AB, a leading company within datacom-telecom convergence, today announces the commercial availability of its client software UniPhone for a large range of mobile telephones. UniPhone provides mobile users an intuitive and easy way to make calls, regardless of the network used for the call – when a user is in reach of a wireless local area network (WLAN) broadband connection calls are made via Internet (VoIP). Outside WLAN zones standard cellular networks are used (GSM, 3G, HSDPA and other cellular standards). Ongoing calls are seamlessly transferred between WLAN and cellular networks when the user is moving in and out of WLAN zones. Users benefit from lowered cost of mobile calls and reduced number of devices – UniPhone powered mobile telephones replaces the fixed telephones in homes and offices (fixed-mobile convergence).

UniPhone as well as supplementary server application software is provided under license to mobile telephone vendors, operators as well as providers of mobile systems and enterprise solutions. OptiMobile serves customers on a worldwide basis and OptiMobile's products adhere to the IP Multimedia Subsystem (IMS) standards specified by the standardization body 3GPP.

"We are very pleased to see that we are able to provide high quality commercial products for virtually all mobile telephones with a WLAN connection", says Lars Edman, CEO of OptiMobile. "We now look forward to support our various customers in their further launch of commercial services within the field of convergence".

UniPhone is available in commercial versions for mobile telephones running the operative systems Symbian series 60, Symbian UIQ as well as Windows Mobile.

About OptiMobile AB:

OptiMobile is a leader of unified mobile communications solutions, in particular within the field of mobile voice solutions. OptiMobile offers a standards compliant engine for unified mobile voice solutions that allows end-users to easily make mobile voice calls over the Internet/Intranet as well as via cellular networks. OptiMobile's customers include mobile system providers, global operators, providers of enterprise communication solutions and terminal manufacturers and vendors.
