OPTIMOBILE LAUNCHES SOFTWARE FOR SONY ERICSSON XPERIA X1 TO SUPPORT VOICE OVER IP AND VOICE CALL CONTINUITY

Stockholm, 27 October 2008 – OptiMobile, a leader of unified mobile communications solutions, today announces that Sony Ericsson XPERIA X1 supports OptiMobile's Voice over IP (VoIP) and Voice Call Continuity (VCC) client software, UniPhone. Sony Ericsson makes the client software available as an integrated component of the XPERIA X1 for use in operator services on selected markets from November 1 2008.

VoIP enables mobile users to make calls over wireless broadband Internet access. It furthermore allows operators to provide mobile voice services more cost efficiently than using the cellular network. VCC is a service that automatically transfers ongoing voice calls between wireless broadband Internet and cellular networks. OptiMobile owns a unique and patent pending core technology in the field of VCC.

"We as well as our customers have excellent experiences with OptiMobile client software for our current products G900, P1i, W960i and P990i and we are delighted that OptiMobile client software is now available for XPERIA X1", says Lars Lindström, Senior Product Manager at Sony Ericsson.

The client software is fully supporting relevant standards within IP Multimedia Subsystem (IMS) for VCC and is provided by OptiMobile AB to Sony Ericsson Mobile Communications AB under a license agreement.
